

John Stimpson's swift boxes

John Stimpson, Wilburton, Cambridgeshire j.stimpson1@btopenworld.com 01353 740451

John makes a version of the successful Model 30 with an integrated nest former inside. Made from marine ply and treated with a wildlife-friendly preservative it measures 400mm wide by 200mm high and 250mm deep. Locations that provide some cover - for example where there are eaves or gable end overhangs and are therefore less affected by long periods of direct sun - are generally preferable. John's standard model comes with a white uPVC roof giving greater weather protection. It is possible to ask for a brown uPVC or wooden one. As dark boxes can heat up more it is best to place them not exposed to full summer sun i.e. facing north-west, north, north-east, east or south-east is acceptable.

Please mention SOS Swifts to John Stimpson if you place an order.
